

BARRICADE FENCE PANEL

GALVANIZED STEEL CONSTRUCTION, SECURITY & PRIVACY, EASY INSTALLATION

BFP-60×72-ST

Add extra security and privacy with our newly redesigned galvanized steel Barricade Fence Panel, designed to integrate with both of our 42" high Jersey shape barricades.

The frame and posts are made with 1 3/8" galvanized pipe and the post supports are made of robust 1 5/8" galvanized pipe. Barricade mounting posts are stored inside the post supports for shipping and are easily deployed for simple installation onto the barricades. Once installed, the fence panel will add an additional 5' 2.5" above the 42" tall barricade creating an overall height of 8' 8.5".

Fence panels are typically used when a construction site borders traffic or pedestrian causeways. If debris or privacy are concerns, mesh fabric can be added to create a more pleasing appearance. Additionally, we offer gate adapter options for both pedestrian and vehicle access. Because the fence panel integrates with our standard construction and TL-3 rated traffic barricades, these are useful in many situations. We can help you decide which combination of products is right for your situation.

FEATURES & BENEFITS

- Adds security and privacy
- Newly redesigned for ease of installation, improved durability and enhanced fit/finish.
- Integrates with OTW42x72 LCD, JSS-42x72
- Stands 8' 8.5" from the ground when installed on 42"

SIZE

- Width of panel: 70.5"
- Height of panel (not including post supports): 62.5"
- Height of post supports: 63.5"
- Height of posts: 50"

COMPOSITION

- Galvanized steel

CUSTOMIZATION

- Add privacy screens
- Add custom branded screens
- Add gate adapter option
